

IN THE SPECIFICATION

Please replace the paragraph beginning on page 30, line 15 with the following paragraph:

The server computer then automatically re-runs the communication sequence in step 840. The line commands in the communication sequence includes the edited line-commands and the new line-commands. At this time, the server computer determines all the various valid permutations for the communication sequence. Since the permutations can be broken down in to each of the steps of the communication sequence, the server computer determines all the permutations for each of said series of steps. Each of the valid permutations comprises a unique combination and order of line-commands and their corresponding outputs from the real service.
